Comprehensive UX Benchmarking Report

Course: User Experience Design & Human-Computer Interaction — UFRO 2026-2
Initiative 03: Assessment feedback that students actually use — **Redo**
Analyst: Bastian Wenckhans — Deliverable: Milestone 1, Scope plane

1. Exploration protocol

1.1 Objective and dimensions

The goal is to evaluate how educational and everyday tools present assessments, rubrics and results, and where they leave the student without the information needed to prepare, understand and question a result. Each tool is reviewed on five dimensions:

- **B1 Preparation:** can the student see the rubric or what will be evaluated before the assessment?
- **B2 Detail:** can the student isolate the criterion or question where points were lost, with the correct answer or comment?
- **B3 Context:** does the result appear next to course statistics (average, highest, lowest)?
- **B4 Progress:** can the student see results over time and spot the biggest error?
- **B5 Query:** can the student ask the teacher about a specific criterion or question?

1.2 Standard tasks

Scenario: Valentina has a mid-term in two weeks and has just received a 4.2 on the previous one. The analyst ran five tasks in each tool:

- **T1** Find the date of the next assessment.
- **T2** Find what will be evaluated before the assessment.
- **T3** Open the previous result and find where points were lost.
- **T4** Find how the result compares with the course.
- **T5** Ask the teacher about one correction.

2. Reference rationale

Tool	Category	Why it is included
Moodle (Campus Virtual UFRO)	Direct competitor	Institutional LMS; students' baseline mental model.
Canvas LMS	Direct competitor	Modern LMS with rubrics, grades view and optional statistics.
Google Classroom	Direct competitor	Widely used; simple assignment list and rubric view.
Intranet UFRO	Baseline	Where UFRO students see final grades today.
Google Calendar	Analogous reference	Monthly grid with day markers; model for the assessments calendar.
Duolingo	Analogous reference	Review of mistakes with the correct answer.
Khan Academy	Analogous reference	Progress and mastery trend over time.

3. Annotated teardowns

[+] strength observed, [−] gap observed.

Moodle

- [+] The achieved rubric level is highlighted, so the points are clear.
- [−] Comments sit in small cells and the result has no course context (B3).

- [−] No way to ask about one criterion; queries leave the platform (B5).

Canvas LMS

- [+] Criterion-level remarks sit under each criterion (B2).
- [+] Can show grade statistics when the teacher enables them (B3).
- [−] Communication is one-way; the student cannot anchor a question to a criterion (B5).

Google Classroom

- [+] Clear list of assignments with due dates (T1).
- [+] Rubric shown as expandable cards with points.
- [−] Written feedback sits in a general private comment, apart from each criterion.

Intranet UFRO

- [−] Shows the final grade only: no rubric, no detail, no statistics, no query.

Google Calendar

- [+] Monthly grid with day markers lets the user read a month at a glance — adopted in HD-05.

Duolingo

- [+] After an exercise, mistakes are shown with the correct answer — adopted in HD-07.

Khan Academy

- [+] Progress shown as a trend over time — adopted in HD-10.

4. Comparison and ERIC matrix

4.1 Synthetic comparison

Benchmarking — synthetic comparison of reviewed flows

	Moodle (UFRO)	Canvas LMS	Google Classroom	Intranet UFRO	Redo (target)
Rubric visible before the assessment	●	●	●	○	●
Points per criterion after grading	●	●	●	○	●
Incorrect questions with the correct answer	◐	◐	◐	○	●
Course statistics next to the result	○	◐	○	○	●
Progress over time	◐	◐	○	○	●
Query anchored to a criterion or question	○	◐	○	○	●
Calendar of assessments with state	◐	●	◐	○	●
Teacher publishes and answers in one place	◐	◐	◐	○	●

● supported in the reviewed flow ◐ partial, or depends on teacher settings ○ not found in the reviewed flow

This matrix summarizes the reviewed flows with the standard tasks; ◐ often depends on teacher or institution settings.

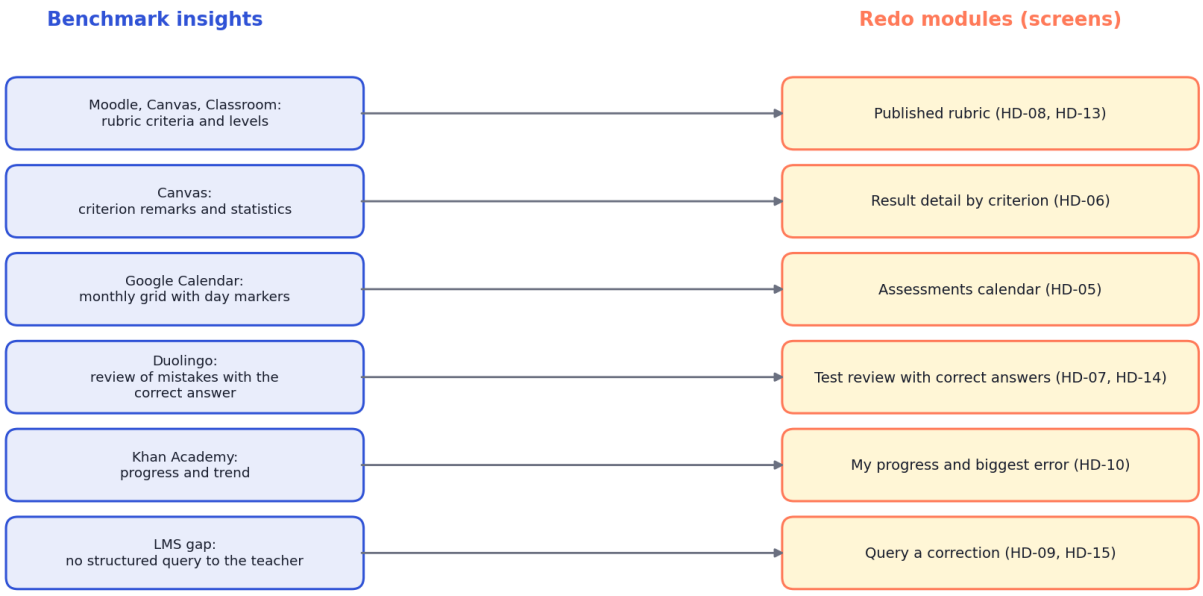

4.2 ERIC matrix

Eliminate	Reduce
• Rubrics that appear only after the assessment • Results shown as a bare number	• Effort to find dates scattered across channels • Emails to ask about a correction

Raise	Create
• Visibility of the rubric before the assessment • Clarity of where points were lost	• Structured query anchored to a criterion • Course comparison and biggest-error view • Teacher tools to publish, review and answer in one place

5. Idea map

The map shows how each benchmark insight informs a Redo module and its screens.

6. Sources

Product documentation and hands-on exploration of: Moodle (rubrics and assignment grading), Canvas LMS (student grades and rubrics), Google Classroom (grading and rubrics), Google Calendar, Duolingo and Khan Academy. Observations describe the flows reviewed by the analyst and may vary with institutional configuration.
