Scope Delimitation, UX Elements & CJM Interface Mapping

Course: User Experience Design & Human-Computer Interaction (ICC612 / ICC716) — UFRO 2026-2
Initiative 03: Assessment Feedback that Students Actually Use (*LoopFeedback*)
Analyst: Bastian Wenckhans
Deliverable: Milestone 1 (Hito 1) — Scope, Structure & Architecture Document
Reference Model: Jesse James Garrett's *The Elements of User Experience* (5 Planes of UX).

---

1. UX Elements Layer Architecture (Jesse James Garrett)

To ensure academic and methodological rigor, every UX Research technique and deliverable developed for Milestone 1 is mapped across the five planes of the Garrett model:

UX Element Plane	Research & Design Technique	Milestone 1 Deliverable / Artifact	Primary Objective & Decision Grounding
1. Strategy Plane *(Estrategia)*	• Semi-structured in-depth interviews ($N=3$). • Qualitative thematic analysis. • Persona modeling. • Value Proposition Canvas.	• User Research Report • Empirical UX Personas • Calibrated Value Canvas • Project Brief	Identifies user breakdown: students face abstract criteria; instructors suffer verification fatigue. Defines the core value proposition: *closing the feedback loop through evidence-bound actions*.
2. Scope	• Competitive & Analogous	• UX Benchmarking	Constrains system to 1 core flow and 2

UX Element Plane	Research & Design Technique	Milestone 1 Deliverable / Artifact	Primary Objective & Decision Grounding
Plane *(Alcance)*	Benchmarking . • ERIC Opportunity Matrix. • Functional requirements prioritization. • Boundary definition (In vs. Out of scope).	Report • Scope Specification & Out-of-Scope Rationale (Section 2 below)	secondary flows. Explicitly rejects non-essential LMS modules (timetables, gradebooks, messaging) to prevent feature bloat.
3. Structure Plane *(Estructura)*	• Customer Journey Mapping (CJM). • Navigation Flow Diagram. • Information Architecture (IA).	• Customer Journey Map • Navigation Flowchart (Designer deliverable) • CJM-to-Interface Mapping (Section 3 below)	Defines user transitions from receiving feedback to submitting evidence. Structures hierarchical navigation between rubric breakdown, action card, and evidence uploader.
4. Skeleton Plane *(Esqueleto)*	• Paper Low-Fi sketching. • Interface evolution tracing. • Wireframe layout definition.	• Paper Low-Fi Prototypes • Evolution Log with rationale for design changes	Translates information structure into physical screens. Cristián (Designer) models layouts on paper and iterates based on usability heuristics.
5. Surfac	• High-Definition	• Figma HD Prototype	Final high-fidelity sensory presentation

UX Element Plane	Research & Design Technique	Milestone 1 Deliverable / Artifact	Primary Objective & Decision Grounding
e Plane *(Superficie)*	(HD) UI prototyping. • Design System & Components. • Accessibility & typography tuning.	(Spanish UI) • Printed UI boards for classroom peer review	using consistent color contrast, status badges (`Pending`, `Submitted`, `Approved`), and typography.

---

2. Rigorous Scope Delimitation (Delimitación del Alcance)

In compliance with the project guidelines, functional exhaustiveness is avoided. The solution is strictly delimited to **one core flow** and **two secondary flows**.

2.1 Core Flow (Flujo Principal): Feedback-to-Remediation Loop

- **Actor:** Undergraduate Student (Valentina / Samon).
- **Goal:** Understand a penalized rubric criterion, access an instructor-approved corrective action, and submit verifiable evidence.
- **Sequential Interaction Steps:**
    1. Student accesses **UI-01 (Assessment Overview)** and views their overall score broken down by rubric dimensions.
    2. Student taps a penalized criterion marked in red/amber ($1/4$ points) to open **UI-02 (Rubric Criterion Inspector)**, viewing the achievement level description alongside the instructor's observation.
    3. Student activates **UI-03 (Prescriptive Action Card)** to read the concrete remediation guideline (*"What to do"*, *"Example"*, and *"Success condition"*).
    4. Student opens **UI-04 (Evidence-Binding Modal)** to anchor their revised asset (file excerpt, screenshot, deep link, or page reference) specifically to that criterion.
    5. Student submits the evidence through **UI-05 (Submission Confirmation)**, changing the criterion status from `Pending Revision` to `Evidence Submitted`.

2.2 Secondary Flow 1: Instructor Verification & Status Transition

- **Actor:** Course Instructor / Evaluator (Martina).
- **Goal:** Efficiently verify whether the student's submission resolved the previous deficiency without re-reading the entire deliverable.
- **Sequential Interaction Steps:**
    1. Instructor opens **UI-07 (Instructor Verification Queue)** displaying student submissions with pending remediation claims.
    2. Instructor views the split inspection card: *Original Rubric Comment* (left) $ \leftrightarrow$ *Student Linked Evidence* (right).
    3. With a single click, the instructor updates the status: `Approved` (with assigned points) or `Requires Further Revision` (with an additional prompt).

2.3 Secondary Flow 2: Longitudinal Criterion Comparison

- **Actor:** Student (Valentina/Samon) and Instructor (Martina).
- **Goal:** Track whether performance on the same rubric criterion improved between Deliverable 1 and Deliverable 2.
- **Sequential Interaction Steps:**
    1. User navigates to **UI-06 (Longitudinal Criterion Comparison View)**.
    2. System presents an equivalent criterion diff table showing Milestone 1 score ($1/4$) vs. Milestone 2 score ($4/4$), with links to past evidence.

2.4 Explicit Justification of Out-of-Scope Features (Qué queda fuera y por qué)

The following capabilities are deliberately **excluded** from the design scope:

Excluded Feature (*Out of Scope*)	**Justification for Exclusion**	**Pedagogical & UX Rationale**
General Academic Timetables & Class Schedules	Excluded	The initiative addresses formative evaluation comprehension, not campus time management. Adding calendars dilutes user focus and creates unnecessary interface complexity.
Comprehensive Institutional Gradebook / GPA	Excluded	Institutional platforms (UFRO Intranet / Banner) already manage final semester averages and weighting. Replicating gradebooks shifts attention away from

Excluded Feature (*Out of Scope*)	Justification for Exclusion	Pedagogical & UX Rationale
Calculator		criterion-level learning.
Unstructured Chat / Instant Messaging Channel	Excluded	Qualitative interviews revealed that unstructured messaging threads scatter feedback and increase instructor fatigue. Communication is strictly channeled through structured *Action Cards* and *Evidence Attachments*.
Automated AI Grading / Generative Auto-Scoring (Milestone 1)	Excluded	Course policy strictly mandates that Milestone 1 showcases human UX design and empirical research. AI is excluded as a decision-maker in Hito 1 (and will be explored under strict human-in-the-loop guidelines in Hito 2).
Multi-Institution Account Synchronization	Excluded	The prototype assumes a single course environment (1 course, 2 related deliverables) to validate interaction mechanics before tackling institutional API interoperability.

---

3. Customer Journey Map (CJM) to Interface Mapping

To establish direct traceability between user fieldwork and Cristian's UI screens, the six stages of the existing Customer Journey Map are paired directly with the corresponding interface modules:

CJM Stage	User Action (Valentina / Samon)	User Emotional State	Associated Interface ID	Screen Name & Core Interaction
01 Receiv	Opens the	Concerned /	**UI-01**	**Assessment Overview**

CJM Stage	User Action (Valentina / Samon)	User Emotional State	Associated Interface ID	Screen Name & Core Interaction
e	assessment result on the platform.	Anxious		**Dashboard:** Summary card showing total grade, delivery date, and color-coded status badges for all criteria.
02 Find	Locates the rubric and identifies which criterion was marked down.	Reassured / Focused	**UI-02**	**Rubric Breakdown & Criterion Inspector:** Expandable rubric grid highlighting the achieved level, points lost, and teacher comment.
03 Understand	Reads the explanation and identifies what concrete action fixes it.	Confident	**UI-03**	**Prescriptive Action Card Drawer:** Dedicated card displaying the instructor-approved task, prescriptive example, and rubric success condition.
04	Updates the	In	**UI-04**	**Evidence-Binding**

CJM Stage	User Action (Valentina / Samon)	User Emotional State	Associated Interface ID	Screen Name & Core Interaction
Revise	report/design and attaches evidence of the correction.	control		**Modal:** Upload/input screen where student anchors a text snippet, page number, image, or URL directly to the action card.
05 Submit	Sends the correction with linked proof for instructor review.	Hopeful	**UI-05**	**Submission Confirmation & Status Tracker:** Confirmation screen moving the action from `Pending` to `Evidence Submitted`, pending teacher review.
06 Compare	Reviews the subsequent assessment result to verify improvement.	Encouraged	**UI-06**	**Longitudinal Criterion Comparison View:** Side-by-side historical comparison of the same criterion between Deliverable 1 and 2.

CJM Stage	User Action (Valentina / Samon)	User Emotional State	Associated Interface ID	Screen Name & Core Interaction
Evaluator Flow	Reviews student evidence and validates resolution of the critique.	Relieved / Efficient	**UI-07**	**Instructor Verification Queue:** Split-screen view allowing 1-click approval or re-prompting without manual document comparison.
