Customer Journey Map

Valentina Rojas and Samon Baker (primary users), Martina Soto (secondary user)

SCENARIO: A student gets a low result on a first submission and has to use the comments in the next one. Valentina studies computer engineering and Samon graphic design, so the work differs but the loop is the same. Martina assesses the first submission and later checks the revision.

EXPECTATIONS: Students know which criterion failed, what to change and what comes first, can show the change and see their progress. The instructor gets there without a heavy extra workload.

Stages	01 Receive result	02 Find the feedback	03 Understand	04 Revise	05 Submit	06 Check progress
Student actions	Opens the result of the first submission.	Looks for the rubric and comments across the platform, files and messages.	Reads the comments and tries to work out what to change and what comes first.	Revises the work, guessing which comment each change answers.	Submits the next version with no way to show what changed.	Compares the new result with the earlier one by hand.
Touchpoints	Course platform.	Platform, PDF, email, messages.	Rubric and comments.	Document or design editing tool.	Submission form.	Two rubrics and two versions of the work.
Instructor actions (Martina)	Releases the results and comments of the first submission.	Comments live in the rubric, an annotated PDF or a spreadsheet.	Tries to make comments specific, which takes time.	Opens the second submission and looks for her earlier comments.	Checks whether each correction was applied.	Assigns new levels and judges progress.
Student thoughts	“I lost points. Where, exactly?”	“Where is the explanation?”	“What should I fix first?”	“Is this what they wanted?”	“Will anyone notice what I changed?”	“Did it actually get better?”
Student emotional journey						
	Discouraged	**Frustrated**	**Overwhelmed**	**Unsure**	**Anxious**	**Uncertain**
Pain points	The grade does not say which criterion cost the points.	Feedback is spread across files and messages.	Long, general comments hide the first priority.	Nobody can tell when a correction is enough.	The revision is detached from the original comment, so the instructor has to hunt for it.	Progress is rebuilt by hand and the rubrics may differ.
Opportunities	Lead with the result per criterion.	Bring rubric, level, comment and version into one place.	One specific action per weak criterion, confirmed by the instructor, with a cue for what comes first.	State how to recognise a completed correction.	Link evidence to the comment and send it for review.	Compare the same criterion when it is equivalent, otherwise say “Not comparable”.
